SINCE our famous Rainbow Collection of Tulips was first offered two years ago, with named varieties, each separately bagged and labeled, thousands of our customers have transformed their spring gardens with brilliant and original color effects of their own planning.

The low price of this collection does not mean inferior bulbs. The bulbs are not of first size, such as those which are listed on the other pages of this catalog, which are of the size required for forcing in greenhouses. But the bulbs in the Rainbow Collection are of flowering size and entirely suitable for planting outdoors in the garden.

Every variety in the collection is a time-tried leader in its color class and, in the opinion of many, superior to newer introductions. Louis XIV, Princess Elizabeth, City of Haarlem and all the others, are flowers of the first rank, grown in the finest gardens of the world.

Our list insures you a collection in which all the colors of the spectrum are represented and enables you to make at insignificant cost a brilliant tulip border.

A Rainbow Tulip Border is a Gay and Brilliant Sight with Groups of Tall Flowers of Contrasting Colors.

Our 1935 Rainbow Garden of Tulips—Five Each of These Ten Varieties

BLEU AIMABLE, 26 in., Darwin, a violet purple, with distinct steel blue shading; large flower, a leader among the violet blues invaluable for color contrast.

BRONZE QUEEN, 28 in., Breeder, a soft buff outside, inside a golden bronze. A striking color rare among flowers and luminous with contrasting tones.

CITY OF HAARLEM, 27 in. Here is a tulip we can recommend without hesitation. It can always be depended upon to make an excellent show, with its immense cups of cardinal red, shading to scarlet at edges of petals. The large, blue base circled with pure white enhances the beauty of this splendid variety.

CARDINAL MANNING, 34 in. Bishop's purple, flushed rosy bronze changing to an almost pure orange at the extreme edges of the petals, tinged yellow base. Large egg-shaped flower.

INGLESCOMBE YELLOW, 18 in., Cottage, a rich yellow flower which though of the Cottage class, has cup shape and is sometimes called the "yellow Darwin."

LOUIS XIV, 36 in., Breeder, a giant flower of purple and old gold, considered by many the finest of all tulips. A few years ago it sold for \$1 a bulb.

PRINCE OF ORANGE, 25 in., Orange scarlet edged light yellow flower of striking beauty. An excellent garden variety.

PHILIPPE DE COMMINES, 26 in., Darwin. One of the finest violets, whose tall, dark beauty is most striking when in company with pink or yellow companions, while their color in turn is made more brilliant in contrast.

PRINCESS ELIZABETH, 26 in., Darwin, largest of the soft pastel pinks, a rich rose toning to silvery rose at edges. Unsurpassed in its color.

PROF. RAWENHOFF, 28 in., Gorgeous deep rose red. Very attractive, and a good tulip to plant, as it always does well, even under difficult conditions.

After Oct. 10 it may be necessary to change this collection. Order early to insure receiving above varieties.

PEONY—Reine
Hortense

ALSACE LORRAINE. One of the most charming and beautiful in our collection. Its large flowers borne in clusters, have petals long and slightly cupped, which radiate symmetrically from the center like a water-lily. The color is a rich, creamy white, center delicately tinted Havana brown. A very striking tone similar in effect to the greatly admired Solange. 75c.

MARY BRAND. One of the greatest red peonies. Immense, full double, vivid crimson flowers with a silky sheen that gives them a wonderful brilliance. A fine garden variety and as a cut-flower a prize-winner, lasting a week or more if cut in the bud. Medium-tall, with good habits and strong stems. Midseason. 75c.

PIERRE DUCHARTE. Late flowering indispensable in the garden as it never fails to give a profusion of bloom after most others are gone. Its large, compact, globular flowers, with broad, rounded petals are a uniform lilac-pink with delicious fragrance. Medium-tall with strong, upright stems. 75c.

REINE HORTENSE (PRESIDENT TAFT). One of the most beautiful of all. A vigorous grower, profuse bloomer, and an excellent cut-flower variety, cut blooms lasting a week or more. Its flowers are among the largest of any and the color is a beautiful uniform light pink. Midseason. A consistent prize winner at the big shows. 50c.

Thanks to depression prices still prevailing in the peony field, here is a garden investment which will pay dividends for life. It seems only yesterday that these four peonies, famous the world over, were each priced at much more than the present cost of the entire collection.

What other plants can you buy, at an average cost of 50 cents each, which will thrive in your garden for a lifetime, producing each spring dozens of giant blossoms possessing the beauty of rare jewels? If you have no peonies of this quality in your garden, then there is a pleasure in store for you which need not be put off another year.

Do not form your opinion of the modern peonies from plants of unnamed varieties which you may have or know about. There is no longer any excuse for growing plants which do not flower freely, or which produce inferior flowers. Varieties like these, with abundant flowers, on bushes that match shrubs in size, produce an effect in the garden which no other flower can duplicate.

Bowls and bulbs not included. See page 9 for bowls.

The hand-made iron plant stand as illustrated is beautifully designed to produce a fixture light and graceful, yet strong, durable, and practical. It is finished in white enamel. Shipped prepaid for \$3.50.

The new fashion for plants on decorative stands or shelves to beautify the sunparlor or sunny window, is one in which garden lovers may easily excel.

Many novel fixtures are now available to prepare an attractive setting for your flowers, and with new methods of forcing bulbs which banish all dirt and require no experience, it is a simple matter to keep the garden window constantly supplied with blossoms at amazingly small cost.

Most of you know how easy it is to force into flower the beautiful, fragrant, Paper White Narcissi, in bowls of water. By using Vaughan's prepared bulb fibre in place of pebbles, the variety of bulbs that can be forced is widely increased.

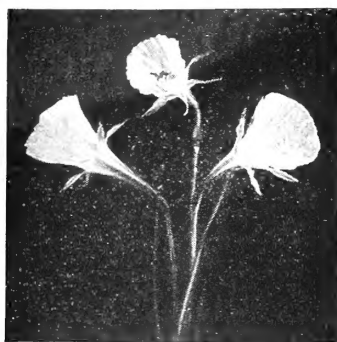

METHOD OF FORCING BULBS IN FIBRE. Moisten Vaughan's Prepared Bulb Fibre to saturation, fill the bowl with wet fibre, and plant the bulbs allowing their necks to emerge from the fibre, but without pressing the fibre too firmly around them. Place the bowl in a cool, airy place where the light is dim or dark, and preferably the temperature does not rise above 55 degrees. Keep the fibre moist, since if it dries out the flower buds may go blind. But water sparingly until good roots have formed. When strong top growth has been made in the dark, take the bowl to a sunny window, where it will have fresh air, all the sunlight possible especially in the morning, and preferably a temperature not less than 55 nor more than 70 degrees.

By this simple method all the subjects offered in our window garden collection can be brought to flower successfully. In addition to the pleasure which the flowers will give, there is the fun of growing the plants, and the experience of watching them develop, from which you will learn many things that will be helpful in the outdoor garden.

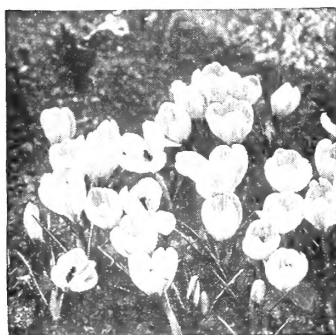

On Pages 6, 7 and 8, many other subjects that can be forced in fibre will be found, should you wish to order them separately.

The finest subjects for the rockery are found among the minor bulbs, which by very reason of their dwarf stature, and delicate blossoms, are likely to be outshone in the border by more conspicuous rivals. They find among the rocks effective settings, where their most elusive beauties are made visible.

In planting bulbs in the rock gardens, there are no especial precautions to be taken. They like good drainage. Most of them need not be planted deeply; four times the diameter of the bulb is the general rule. Those that blossom early will look best against the background of a rock. They do not need protection from the cold, but will escape many dangers if they are shaded from spring sunshine which might bring them prematurely into growth. In shallow soil, a mulch which will protect them from the wash and spatter of March rains is advisable. They may be planted alongside other perennials, if one considers that their foliage must be left to turn yellow after they bloom, and places them where they will not interfere with treasured small plants which blossom soon after them.

Miniature Daffodils

The following are charming subjects for rock work, where their dainty flowers are seen to perfection. They should be left undisturbed for years, and if happy will soon establish themselves and afford a lovely picture in early spring. All like moisture, and should therefore be planted at the foot of the rockery. Triandrus Albus (Angel's Tears) delight in partial shade and a light gritty soil, and should be given a well-drained position.

BULBOCODIUM CONSPICUUS. Yellow Hoop Petticoat, flowers rich golden-yellow of hoop-petticoat form and rush-like foliage, height 6 inches. Each, 20c; doz., \$1.75; 100, \$12.

TRIANDRUS ALBUS (Angel's Tears) Creamy white flowers, 7 inches tall. Each, 25c; doz., \$2.25; 100, \$17.00.

Better Lawns With Seed from Vaughan's

WE are much pleased to inform our thousands of good customers that owing to good crops of the major grasses we are able to supply grass seeds of our usual excellent quality at lower prices.

Autumn is the most favorable time to make new lawns and repair old ones. The sturdy growth of seedling plants is favored by the cool nights and usually plentiful supply of moisture. As the days grow shorter and the weather cooler, the growth of the plants changes, with more root growth and less top growth and a general thickening and strengthening of the plant. Ask for our booklet on lawn making.

We carry in stock seeds of all recognized lawn and golf course grasses which can be grown from seed and on request will gladly quote prices of any type not offered on this page.

Flowers You Can Grow Indoors

Lilies of the Valley

THESE beautiful, fragrant flowers may be brought to flower in 18 to 21 days, if pips from cold storage are used. They are easily forced in a bowl, if planted in sphagnum moss and kept well watered. Their dainty fragrance is preferred by many to the large Paper White Narcissi, and they are much quicker to flower. Do not order more than you intend to use at once as the cold storage pips will not keep. Plant about 25 pips in a 7-inch bowl, place in a warm temperature, 65 degrees Fahrenheit and shade from light until leaves and spikes are well developed, then admit light gradually. Increase temperature to 75 degrees or 80 degrees if possible. An inverted pot over each bowl answers admirably to shade them. They may be forced in soil the same way, in a 7-inch pot or pan. This is the treatment for cold storage pips only.

COLD STORAGE PIPS, (Ready November 1). 25 for \$2.00; 100 for \$7.00, postpaid.

SPHAGNUM MOSS, sufficient for 25 pips, 10c, postpaid.

LILIES ON YOUR TABLE ALL WINTER

One month covers the time from planting cold storage lily of the valley pips, through flowering, and fading. To keep your bowl filled through the winter we have arranged to book orders for divided shipments, a month apart. Cold storage pips must be planted promptly on receipt. We will send the first shipment at any date you wish (Nov. 25 will give you Christmas flowers) and will duplicate the shipment every 30 days thereafter, as long as you wish (until April 1). Minimum shipment is 25 pips, for \$2.00, prepaid to 300 miles. For two months' supply (25 each 30 days), send \$4.00; 3 months, \$6.00; 4 months, \$8.00; 5 months, \$10.00.

The Yellow Paper White (GRAND SOLEIL D'OR)

A larger, stronger scented form of the Paper White Narcissus colored a beautiful golden yellow with a darker cup.

Mammoth bulbs. Each, 20c; per three, 45c; dozen, \$1.60; 100, \$11.00.

Paper White Narcissi to Grow in Pebbles and Water

THESE have been favorites for ages as a decoration for the living room during the coldest winter months when flowers are scarce. Their culture is simple, and with good strong bulbs such as we supply, flowering is sure. Plant bulbs in shallow bowls filled with pebbles, or fibre, and water. Keep in the dark until roots form (about 2 weeks) then bring into light. A day temperature of not over 70° is best.

Fancy selected bulbs (13 ctm.). Three bulbs for 15c; doz., 50c; 100, \$3.00; 1,000, \$25.00.

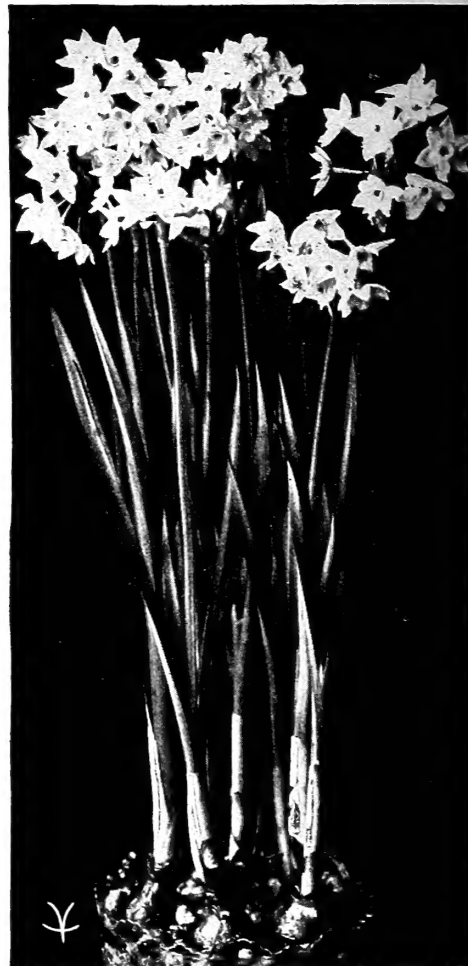

Mammoth bulbs (14 ctm.). Three bulbs for 20c; dozen, 60c; 100, \$4.00; 1,000, \$35.00.

Jumbo bulbs (15 ctm.). Three bulbs for 25c; dozen, 75c; 100, \$5.00; 1,000, \$45.00.

Chinese Sacred Lily (Narcissus)

THIS narcissus is called by the Chinese the "Joss Flower" or "Flower of the Gods," and "Water Fairy Flower." It is highly prized for the abundance of its flowers and its marvelously rapid growth. The flowers are white, with yellow cup, and very fragrant. Each bulb produces several flower-spikes. In China and Japan the bulbs are grown in the living rooms in fancy bowls filled simply with pebbles and water. Place in a sunny window by day and on a table near the center of the room by night, as frost destroys the flower buds. Care should be taken that it is not placed in a draft, as this may cause non-flowering. Recommended for Christmas flowering.

Large Bulbs. Each, 10c; three for 25c; per dozen, \$1.00; 100, \$7.00.

Growing in Pebbles and Water

Vaughan's Giant Freesias

These fragrant flowers are easily forced in pots, pans or window boxes; and they make delightful decorations on the table or in the sunparlor. They should be potted in September and stood outside until the approach of frost, then taken inside to the conservatory or a sunny, airy window where they will flower freely from January onwards.

FREESIAS Forced in Flower Pot

In Living Room or Sun Parlor

Amaryllis

OF ALL bulbs which the amateur can grow successfully indoors, the Amaryllis is the largest, most beautiful, surest to flower and most easily handled. Our new hybrids, especially, are so gorgeous in size and coloring as to amaze those not familiar with them. From a single stem, spring from one to three lily-like flowers, six to eight inches in diameter.

Place only one bulb in each pot, covering it as far as the neck or upper narrow part. Water sparingly at first until the flower shoots begin to appear. Some growers keep them in the dark until the flower stems are four or five inches long, and then bring to light.

After flowering they should be placed in a warm window, or set outside in sand or cinders and watered every day (sometimes twice a day), until the end of August when water should be gradually withheld and the bulbs allowed to go to rest. In the fall they can be forced again as with new bulbs.

EQUESTRE. Orange-scarlet. Each, 15c; doz., \$1.50; 100, \$12.00.

VAUGHAN'S NEW HYBRIDS. One of the finest strains of Amaryllis we have yet seen, raised by an eminent grower whose entire stock we have purchased. Flowers are immense, in an amazing range of colors, blended, splashed and striped in a manner not seen in other strains.

Jonquils are noted for their graceful, sweet-scented flowers, in or out-of-doors. They thrive well in a moist, shady position in borders, and make splendid edgings to beds of some of the taller Narcissi. For indoor decoration three or four bulbs should be grown in a four or five-inch pot.

Bulbs, bowls and fibre, for growing bulbs indoors, see page 9.

KING ALFRED

Forcing Daffodils

DAFFODILS are excellent subjects for indoor growing in bulb pans in soil or fibre. This method requires more skill than growing bulbs in water. Success depends on the extent to which fine roots are developed before the pots are brought to the light. These roots develop best when the pots are kept a few degrees above freezing. A pit in the garden which is protected from surface water, so it will not fill, is an excellent place to store the bulbs. The pots may be covered with leaves, straw, or even with ashes, or sand; and brought in, after eight weeks, when it is desired to begin forcing them. Figure on not less than five months before flowers are produced. After being brought into the house, a temperature of 50 degrees is sufficient until the formation of buds begins, and the best flowers will then be formed in a temperature of 60 degrees. All the light possible should be given after top growth begins.

Emperor. The entire flower is a rich yellow trumpet of immense size and petals so broad that they overlap. Three of these bulbs planted in a 6-inch pot will make a splendid show. Each, 10c; doz., 90c; 100, \$6.00.

King Alfred. "The King of Yellow Daffodils." Tall, vigorous, golden yellow flower, of elegant form. The expanded trumpet measures 2½ inches in diameter, the perianth proportionately large and segments gracefully twisted. Each, 15c; doz., \$1.25; 100, \$9.00.

Spring Glory. A very early showy bicolor daffodil with large white perianth, broad and spreading, trumpet large and handsome, bright yellow with open frilled mouth. Each, 15c; doz., \$1.25; 100, \$9.00.

Tresserve. A flower very large with slightly campanulate canary-yellow perianth and a very bold rich yellow trumpet with wide expanded brim deeply flanged and measuring 2½ inches across. Each, 15c; doz., \$1.50; 100, \$10.00.

Cheerfulness. The double Elvira, a very pleasing double white Poetaz, good stems, a fine garden and show flower. Each, 20c; doz., \$1.75; 100, \$12.00.

Laurens Koster. Perianth white, cup light orange-yellow. Each, 10c; doz., 95c; 100, \$6.50.

Hyacinths

HYACINTHS are returning to favor in gardens. Blossoming with the early tulips, they contribute to the spring garden fragrance as well as colors which at that time no other flowers can give so well. Indeed, it is doubtful whether at any time of the garden year lovelier true pinks and blues can be found than those which hyacinths provide.

We think of hyacinths, perhaps, as flowers for formal beds, where their upright posture and uniform height serve so well to execute precise designs. But does not every garden have locations, where formal habit will look well? To border paths, for example, and near all garden architecture, including ornaments such as bird baths, pools and fountains. And groups of hyacinths may well be worked into the border planting, where they will provide a needed color foil or accent.

For garden planting, it is not necessary to use the largest forcing sizes. Bulbs of third and bedding sizes will do well. Take especial care to plant them in well drained soil, and if there is any doubt, elevate the bed a few inches to keep them above water. Plant bulbs six inches deep, and after the ground has frozen a light mulch to keep the frost in, will benefit.

Hyacinths in Glasses

Fill the glass with clear, soft water, so as to nearly touch the base of the bulb, putting a small piece of charcoal in each glass to keep the water pure and sweet. The filled glass should be placed in a dry, cool, dark place, and kept there until the roots almost touch the bottom of the glass, when they may be given more heat, and gradually exposed to the light. Water must never be changed, but only be replenished. Large bulbs are best for this purpose.

Dutch Roman or Miniature Hyacinths

These are small bulbs of the varieties listed in the center column on this page, and they are excellent for growing by amateurs in pots, pans, bowls or window boxes. They give flower spikes much larger than would be expected from their size, which is from 13 to 14 centimeters in circumference. Your selection of named varieties, chosen from the list in center column. Each, 10c; doz., 85c; 100, \$6.

French-Roman Hyacinths

The white variety, if planted early in September and slowly forced, will bloom in December. The others require from two to three weeks longer. They will flower in three months.

Blue, per doz., \$1.00; per 100, \$7.00.
Dark Pink, per doz., \$1.00; per 100, \$7.00.
Light Pink, per doz., \$1.00; per 100, \$7.00.
White, select size, per doz., \$1.35; per 100, \$9.00.

Exhibition Hyacinths (Mammoth Bulbs)

These are the bulbs 19 centimeters and over listed in the center column. They are not recommended for outdoor planting but should be used for forcing in glasses, or in pots or pans. We have arranged with one of our Dutch growers to select these bulbs for their ability to give huge spikes of flowers, suitable for flower shows, or for striking decorative effects.

A succession of decorative flowers can be produced with exceptional ease and certainty by starting mammoth hyacinths to grow in glasses at intervals of two weeks.

Hyacinths in Pots

For Winter Blooming

LIGHT, rich soil produces the best flowers. Place each bulb one inch deep, an inch and one-half from each other bulb or edge of pot. Water well, and set away in a dark, cool cellar, or an outdoor pit which is well drained. If outside, cover with three or four inches of sand or ashes. Let them remain there for eight or ten weeks to root, then bring them into a warm room, but keep them in the dark (cover the pot with a paper bag, cloth, etc.). Then when the flower spike is three or four inches out of the bulb, they may be exposed to the light, and will open beautifully. The larger bulbs are best for indoor growing, the largest bulbs throwing the most magnificent flower spikes. French-Roman Hyacinths are excellent for growing in pots, flowering earlier than the others.

Vaughan's True Floral Perfumes

AFTER extensive testing and experimental work, we present a distinguished group of true odor floral Perfumes and Colognes. We have insisted upon trueness to the actual flower as our standard, and welcome direct comparison with fresh flowers as a test.

Our perfumes and colognes are all full strength and properly aged, both essential to quality. Cologne contains one-eighth the amount of oil used in perfume, and is not as lasting. However, many are adopting the European habit of using cologne as a refreshing lotion or handkerchief bath during warm weather and in heated rooms during the winter.

VAUGHAN'S TRUE FLORAL PERFUMES AND COLOGNES

The Following Odors are Available in Both Cologne and Perfume:

Darwin Tulips

DARWIN TULIPS IN A FORMAL GARDEN

ALL May flowering tulips may be planted together harmoniously. Darwin, Cottage and Breeder tulips are merely different clans, having distinctive family traits, but each with beauty which blends admirably with its cousins. They are listed separately for convenience of reference.

Planning a tulip garden is made easy by the fact that you may count so surely upon the flower blooming as planned. The height, the color, the flowering season, are all so well established, it is a pleasure to plan a color effect and in the spring to see it develop in life, just as imagined the previous fall.

Darwin tulips are characterized by a soft overtone which gives their colors a pastel effect. The flowers are cup-shaped and carried on tall, stiff stems. In color range they include all the rainbow hues, in amazing variety. Yellow, which long was missing from the Darwins, is now represented by several fine varieties; and new varieties include splendid giant whites.

Included in the variety lists on this and the following pages are many newly introduced varieties which show improvement in color, height, size or in some other important respect, over older varieties. But at the same time we retain the best of the old and tried varieties, many of which remain the finest of their type, and may never be surpassed.

Parcel Post. If you wish bulbs sent by parcel post, add to our prices, postage at zone rates from Chicago (see order blank), counting twelve bulbs as one pound, fifty as four pounds.

★Varieties starred thus are in our opinion of outstanding merit for garden planting.

New Hybrid Classes

Mendel Tulips Mixed Are the result of years of work crossing the earliest of single early tulips, the Christmas flowering Duc Van Thol type, with the tall late flowering Darwins. They flower very early, on extremely long stems. The color range is rather extensive, including the popular, brilliant shades of the Darwins. Doz., \$1.00; 100, \$7.50; 1,000, \$70.00.

Lacinated Darwin

Sundew (25 in.) This flower is something entirely new in tulips. The curved petals are provided with barbs, giving the edges of the flower a fringed effect. It is said to be a natural sport of the popular variety Bartigon, retaining the brilliant crimson coloring and magnificent size of its parent. Doz., 80c; per 100, \$5.75; 1,000, \$55.00.

As soon as the segments fall from the tulip snap off the seed-heads. Taking away the necessity of making seed from the bulb quickens the ripening of the foliage and hastens the lifting time from beds that have to be filled with summer bedding. The old-time test for lifting is as soon as a flower stem can be twisted around the finger without snapping. Lifted then and laid in a trench in dry soil to ripen, the bulbs may be used again and again for bedding.

DARWIN TULIPS IN THE FORMAL GARDEN

The Favorite in Our Trials

Out of several hundred varieties on display in our trials at Western Springs, Ill., last spring, the variety which was most popular was Gloria Swanson.

An enormous rosy red, 32 inches tall, with strong stem, it has a grace and charm which win universal admiration.

6 for \$1.00; 12 for \$1.95; 100 for \$14.00.

Triumph Tulips

NOT since the Darwin race was introduced, has so great an improvement been made in the tulip family, as in the new Triumph class. Here are early tulips—coming at a time when every bit of color in the garden is more precious because there is so little of it—with stems as tall, flowers as large and colors even more brilliant than the Darwins. A hybrid of the Darwin and early singles, the Triumph tulips have a distinctive beauty of their own, and a clear luminous color quality which will make you treasure them. Two full weeks are added to the tall tulip season by planting these.

Tulip Grullmannii

ONE of the outstanding introductions of last few years is this new type. It has been obtained by crossing a Darwin with a species tulip. The flowers are long and large, carried on stout stems holding the blossom boldly upright. All are about 27 inches in height and of remarkably robust habit. The bulbs multiply rapidly.

Breeder Tulips

BREEDER tulips are closer to the parent type of this ancient flower than others. The origin of the tulip is hidden in the dim past. But we know that the Dutch fanciers who in 1634 to 1637 speculated in new varieties during the reign of tulipomania grew the "mother bulbs," or Breeder tulips, to produce new striped varieties by "breaking." The Darwin race is supposed to have developed from the Breeders. For a long time the dark, rich colors of the latter were neglected in favor of the brighter and clearer tones of the other types. But recently taste has changed, and the richly hued Breeders have come into favor.

They blossom in May, and though not so tall, perhaps produce, as a rule, even larger blossoms than the Darwins. The colors include many rare among flowers—browns, bronzes, purples, blue-blacks, deep mauves, dull gold and dark lilac all exquisitely blended.

Planting. Plant the same as Darwins.

★Varieties starred thus are in our opinion of outstanding merit for garden planting.

★**Bacchus** (28 in.) Despite the fact that this is one of the oldest Breeder tulips in existence, having been introduced over 300 years ago, there is no other tulip that can be called its superior in clear, richness of color and beauty of form. The flower is rather narrow and long for a Breeder, the color is very similar to the purple of Concord grapes. Doz., 90c; 100, \$6.50; 1,000, \$62.50. (Illustrated on Inside Back Cover.)

Cottage Tulips

A group of the tall giant yellow variety Avis Kennicott.

COTTAGE tulips are inclined to have pointed petals, sometimes turned back, and the blossom to be smaller and more slender. But they harmonize perfectly with the Darwins and Breeders and supply a quality of clear, bright color which these lack. They blossom a few days later than the Darwins, often carrying the flowering period of Spring bulbs into the early days of June, especially if planted in a shady position. Many sweet-scented varieties are included, such as Gesneriana Lutea, and Mrs. Moon.

Wild Tulip Species

For the Rock Garden and Hardy Plant Border

The general characteristics of the various species, all of which are natives of Asia Minor and Central Asia, are bright colors and recurved petals. These Tulips do not always feel happy in their new surroundings and after two, or possibly three, seasons they will disappear. With care and the provision of suitable quarters they will flower quite satisfactorily. They feel best contented in rock gardens and borders.

Australis (Celsiana) Yellow, tinged on outside of petals reddish bronze, a pretty species somewhat resembling T. Sylvestris, is found growing in Spain and Southern Europe. Height 16 inches. Flowering in April. Doz., \$1.20; 100, \$9.00; 1,000, \$85.00.

Cornuta Stenopetala Beautifully formed flower, lacinated like a Parrot Tulip, but held upright on tall, stiff stem. Very interesting and curious in a collection. Color combination, scarlet and gold. Doz., \$2.00; 100, \$14.50.

★Clusiana "Lady" or "Candystick" Tulip. Outer petals bright cherry red, inner petals creamy white, with violet base; small flower, but very distinct. It should be planted in light soil 6 or 9 inches deep in the rock garden or among stones in the front of the herbaceous border. A warm and sheltered situation should be chosen, where it will prove to be a gem among early flowers. Flowering season late April. Height, 8 inches. Doz., 95c; 100, \$7.00; 1,000, \$65.00.

Eichleri A grand Tulip from Turkestan; immense crimson-scarlet flowers with glistening black center marked with gold. Flowers at the same time the single early tulips do. Has very pointed petals. Height 11 inches. Doz., 95c; 100, \$7.00; 1,000, \$68.00.

Fosteriana Fosteriana is a majestic tulip of great size; the dazzling scarlet flowers are borne upon stout stems, 18 inches and even as much as 24 inches high. Vermilion will perhaps best describe their intense and lovely color. Drainage must be perfect, and the sunniest place possible should be apportioned to it. It flowers in late April. Doz., \$4.00; 100, \$30.00.

Greigi Brilliant Orange-scarlet, with deep yellow reflexing petals and broad, thick leaves flushed with purple. Flowers in late April and May, and is a gorgeous Tulip. Wants a hot, dry situation. Height, 9 inches. Doz., \$4.00; 100, \$30.00.

Linifolia Light vermilion red. Extra fine for the rock garden. Doz., \$3.00; 100, \$22.50.

SPECIES, TULIP CORNUTA STENOPETALA

Rembrandt Tulips

REMBRANDT tulips are in reality "broken" forms of Darwin tulips. Broken tulips, on account of their odd colorings and variegations, were very popular at one time, and while the modern tendency to favor self-colors is recognized generally throughout all countries, these broken forms possess splendid decorative value. The stems average from 18 to 22 inches in height.

THERE is a distinct revival of the popularity of double tulips. Coming a little later than the singles, they last much longer, and where the single and double are planted together the season of flowering is prolonged from two to three weeks. The double tulips require a soil more fertile than the singles for perfection of blossoms; and where well grown their mammoth peony-like flowers of delicate or brilliant coloring are most effective either in groups in the border, or in formal beds. The double tulips do very well when grown in pots for winter blooming, but they must be forced more slowly than the single tulips.

Explanatory. The number following the name of the variety denotes the height in inches, while the (a) and (b) indicate their earliness of bloom—the (a's) flower together and are earliest; the (b's) flower together, but are somewhat late.

★Varieties starred thus are in our opinion of outstanding merit for garden planting.

Single Early Tulips

TWO OR THREE weeks of brilliant color in April, following the daffodils and preceding the Darwin tulips, are worth much to any garden. The early tulips alone can supply it; and among them can be found varieties to play almost any part your garden scheme demands. It is a mistake to think of the early tulips as all short-stemmed, and too bright in color. It is true their brilliancy cannot be excelled by any other class of their own family or any other flower family that we know. But there are also varieties of delicate tints and shades, as beautiful and with flowers as large as anything the May-flowering classes can produce. In height, 12 inches is not uncommon, and a graceful carriage fits these taller kinds to serve in any role a Darwin would grace.

Explanatory. The number following the name of the variety denotes the height in inches, while the (a) and (b) indicate their earliness of bloom—the (a's) flower together and are earliest; the (b's) flower together, but are somewhat late.

Daffodils or Narcissi

COMING in March or April, Narcissi or Daffodils, are the first of the flowers that dominate. They are most pleasing in natural arrangements. They like to nestle at the feet of shrubs. Once planted they need not be lifted until they suffer from crowding.

The yellow large trumpets like a fairly heavy soil, while the white trumpets and Leedsii take more kindly to a sandy soil. Do not use fresh manure, but fertilize only with bone meal. Plant the bulbs six inches deep and the same distance apart, in a deep, well worked soil.

AEROLITE (Trumpet)

DAFFODILS are the first of the major garden flowers to blossom in the spring. This makes them doubly precious, as heralds of a season of joy, after the long winter.

After several years of scarcity, due to the quarantine against importation of narcissus bulbs for sale, the supply of American grown bulbs has grown and the number of varieties obtainable here is much enlarged, while prices are much reduced.

Great advancement has been made in breeding new varieties, many of which we offer this year.

Types of Daffodils Defined

The Royal Horticultural Society of England divides the narcissus family into eleven sections and these with subdivisions to make it possible to classify the hundreds of new varieties appearing each year. As now accepted the various classes are as follows:

I. Trumpet Daffodils. (a) Varieties with yellow or lemon colored trumpets and perianth of same shade or lighter, but not white. (b) Varieties with white trumpet and perianth. (c) Bicolor varieties, those having white or whitish perianth and yellow, lemon, or primrose trumpets. Examples: (a) Emperor; (b) Mme. de Graaf; (c) Empress.

II. Incomparabilis. Cup or crown not less than one-third, but less than equal to the length of the perianth segments. (a) Yellow shades, with or without red coloring in the cup. (b) Bicolor varieties, with white or whitish perianths and self yellow, red stained or all red cups. Examples: (a) Sir Watkin; (b) Lucifer.

III. Barrii. Cup or crown less than one-third the length of the perianth segments. (a) Yellow shades, with or without red coloring on the cup. (b) Bicolor varieties, with white or whitish perianth and self yellow, red stained or red cups. Examples: (a) Barrii Conspicuous; (b) Incognita.

IV. Leedsii. Perianth white and cup or crown white, cream, or citron, embracing all sizes found in the Incomparabilis and Barrii classes. Examples: Mrs. Langtry, White Lady.

VIII. Tazetta and Tazetta Hybrids. Includes the bunch flowered or polyanthus narcissus and the poetaz varieties. Examples: Paper White, Elvira.

IX. Poeticus varieties. Example: Horace.

Culture of the Daffodil

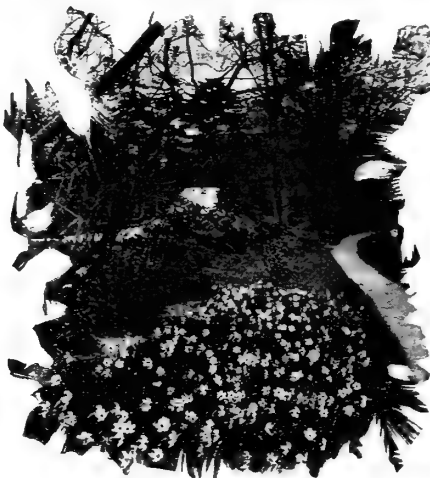

The daffodil tribe likes a cool root run and its flowers are at their best in the cooler days of spring. Therefore it is essential to dig the soil deeply and provide humus. Like the tulip, the daffodil will not thrive if there is fresh manure in the soil and bone meal alone should be used as a fertilizer when the bulb is planted. It likes a moist soil but it must have excellent drainage. The bone meal should be mixed in the soil below the bulb and if the soil is heavy, a cushion of sand is advisable.

Where to Plant Them

Daffodils are particularly fine subjects to plant under the edge of bushes or among perennials in the hardy border as they seem to like to nestle among the roots of their neighbors. A clump of golden trumpets peeping from beneath the overhanging branches of Spiraea Van Houttei or nestling in a sheltered angle of a building are one of the glad some sights of early spring.

A few bulbs can be tucked into odd corners all about the garden and they will repay mightily when the first sunny days of spring bring their sturdy shoots breaking through the earth.

Daffodils and narcissus need not be moved for several years if they are flourishing, in fact not until the clump becomes so large that it is evident it needs to be divided and they should be replanted at once.

BERNARDINO (Incomparabilis)

Daffodils or Narcissi

Barrii

Their pedigree is similar to the *Incomparabilis* type, but they inherit more of the *Poeticus* character in having the cups less than one-third of the length of the perianth segments (petals) and more of the red parent blood suffused through the cup.

Thanks to the brilliant contrast effects due to color in the cup, the *Barrii* type is contributing many improved varieties to the daffodil list and it is here that further progress may be expected. The flowers have a character and grace which make them charming either for cutting or garden display.

Alcida Giant flower, pure white perianth opening flat, star-shaped, with individual petals over 1½-inch wide; broad citron-yellow cup with blood-orange frill; strong grower, fine substance and wonderfully free-flowering; very late. Each, 25c; doz., \$2.25; 100, \$17.00.

Firetail Deservedly popular the world over; broad petalled creamy-white perianth and large orange cup with scarlet-orange frill. Each, 35c; doz., \$3.50; 100, \$25.00.

Niobe Perfectly formed, flat-opening broad petalled perianth of creamy white; flat eye, edged intense red-orange; the unopened bud droops prettily, making a contrast with the opened flowers. Each, 30c; doz., \$2.75; 100, \$20.00.

Red Beacon A lovely flower which immediately attracts one by its brilliantly colored cup; the perianth is ivory-white, broad and of great substance, slightly shaded sulphur at base, cup prettily fluted and of the most intense fiery orange-red, shading down to golden-orange; ht., 15 in. Miniature Daffodils

The following are charming little subjects for rock work, where their dainty flowers are seen to perfection. They should be left undisturbed for years, and if happy will soon establish themselves and afford a lovely picture in early spring. All the Bulbocodium like moisture, and should therefore be planted at the foot of the rockery. When coming into bloom give water freely. Triandrus albus (Angel's Tears) delight in partial shade and a light gritty soil, and should be given a well-drained position.

Naturalizing Bulbs in Grass

The planting of bulbs in the wilder parts of the garden, and within sight of woodland walks, is very much in favor nowadays, and rightly so, as in no other way can such charming color effects be brought about for the spring. There are many kinds of bulbs suitable for this purpose, but for effects on a large scale, nothing can be more effective than Daffodils planted in large drifts, and where they can be used with backgrounds or surroundings of Conifers they usually attract a lot of attention. The great advantage of this kind of gardening is that it is more or less of a permanent character, and does not have to be repeated each season. In the majority of soils Daffodils will thrive and increase as the years go by. There can be no definite rules laid down as to the style of planting in these semi-wild parts of the garden, it must depend on the immediate surroundings, but above all, avoid straight lines and clearly defined circles or clumps, or planting the bulbs at regular intervals, as this tends to produce a rather unpleasant spotty effect. If space permits, Daffodils are usually most effective when planted in large drifts or waves of certain varieties, from the very early to the quite late ones, but as a rule, Daffodils for naturalizing are offered at reduced rates already mixed in their various sections. Other miscellaneous bulbs that are offered very cheaply for this work are Chionodoxas, Snowdrops and Crocuses in large quantities, the Winter Aconite (*Eranthis Hyemalis*), Muscari, Scillas, and Iris reticulata. In planting the smaller types of bulbs they should be kept nearer the paths as a general rule, as, being dwarf, they are not suitable for distant effects.

POETICUS

Cyclamineus Hybrids

Cyclamineus blood like that of Triandrus, imparts such a distinct form to daffodils, that a separate division has been made for its hybrids, which have trumpet-like rich yellow, straight and tubelike and perianths reflexed as in a cyclamen; very early flowering.

February Gold Perianth golden yellow, trumpet fringed orange; very early. Each, 25c; doz., \$2.50; 100, \$18.00.

★Varieties starred thus are in our opinion of outstanding merit for garden planting.

Hardy Bulbous Iris for the Garden

DUTCH IRIS

They resemble the Spanish Iris, but their habit of growth is more vigorous, the flowers larger, with conspicuous orange blotches on the wide falls. Buds open at least two weeks before the Spanish Iris, and immediately after the last of the May flowering tulips are gone. Through untiring years of hybridization, they not only surpass the Spanish Iris in size and sturdiness of growth, but also in brilliancy of color.

Adrian Backer. A beautiful, large flowering novelty of uniform lilac purple.

A. Bloemaard. Standards dark purplish blue, falls lighter blue, very large flower, early.

D. Haring. Flowers large, standards white, tinged lavender. Falls creamy white, with conspicuous golden blotch. Very beautiful. Height, 30 inches. Received Award of Merit, Royal Horticultural Society, 1923.

E. B. Garnier. Standards and falls uniform deep blue, the improved Imperator.

Filifolia Imperator. One of the most popular florist's varieties. The flowers are large, dark blue, brilliant orange blotch. Very showy, strong grower, highly recommended. Mulch well the first year. Height 27 inches.

DUTCH IRIS

IRIS RETICULATA

Fragrant Iris—Hardy with Protection
RETICULATA. This lovely species is one of the treasures of the garden or rock garden. It can best be described as a small form of the Spanish or Dutch Iris. Its main value lies in the fact that it may be forced into bloom in the house with the greatest ease. Six or eight bulbs put into a 4 or 5-inch pot when received will bloom about Christmas time. The fragrant blossoms remind one of a bunch of fresh violets. Perfectly hardy with reasonable protection. It is one of the loveliest early flowering bulbs for the rockery. To show it off well, plant a number of bulbs under the white Arabis Alpina; you'll enjoy the results more than we can tell you. Each, 20c; doz., \$2.00; 100, \$15.00.

ENGLISH IRIS

Hardy with Some Protection

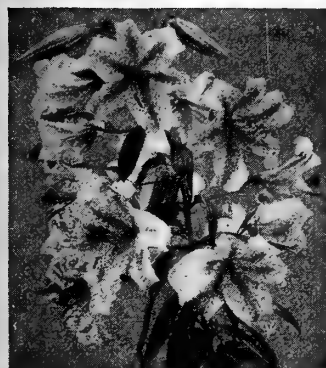

These magnificent bulbous Irises thrive in any ordinary garden soil but prefer a good loam. The earlier the planting, after beginning of September, the greater the success; the bulbs should be planted 4 inches deep. The varieties we have especially selected as being the very finest and most distinct in cultivation, and they will be found as strikingly beautiful in color as many of the sumptuous orchids. They flower from end of June to beginning of July, thus succeeding the Bearded Flag Irises, Early Xiphium and Spanish Irises. As cut flowers they take a first place.

The Hardy Lilies

LILIAM Auratum

LILIAM Regale

LILIAM Canadense

LILIAM Rubrum

Many imported lily bulbs arrive in this country very late in the fall. Note carefully the arrival dates stated below. If freezing threatens before your bulbs arrive, cover the soil with a heavy mulch to keep it soft.

LILIES are so beautiful, so fragrant, we are likely to think them too fine for the amateur to grow. But many are hardy, thrifty flowers, capable of surviving conditions which would overcome flowers much less beautiful. Grow them in the border in small groups, with background, where their beauty has a suitable setting for its display. They blossom, as a rule, in midsummer, when fine flowers are at a premium.

Lilies Arrive from Japan in November

Most Lily Bulbs, being of late maturity, are not ready before October and late November (the best time to plant them). Where the ground is liable to freeze up before the late lilies arrive, it should be mulched with six or eight inches of leaves or straw so the bulbs may be planted on arrival.

Outdoor Culture—When planting lilies out-of-doors, see that they have a well drained position, and where they will be shaded from very hot sun. Such places can usually be found around the shrub borders, and in the hardy plant border. Never mix manure in the soil around lilies, but enrich with a standard commercial plant food or with bone meal. Many varieties are termed "stemrooters," that is, they develop roots on the stem up to two or three inches from the ground. These roots are voracious feeders, and on them depend greatly the number and size of flowers. When they appear, the plant should receive a top-dressing of good rich soil on which they can feed freely. Spade over the ground thoroughly to a depth of 18 inches before planting lilies. Plant the bulbs 4 to 6 inches deep, depending on their size and the soil, deeper in light soil. Put some sand under and around the bulbs, and after covering protect with six or eight inches of leaves or other litter, which must be removed in late spring.

Indoor Culture—Lilies should be potted immediately upon receipt, if intended for growing in pots or for forcing. In potting use a compost of fibrous loam and sweet decomposed leaf soil, with plenty of coarse sand or a mixture of good peat, loam, and sand, adding to the compost a few pieces of charcoal. See that the pot is well drained. The bulb should be set about half-way down in the pot and barely covered with soil, thus leaving room to top-dress and fill the pot with more soil when stem-roots appear above the bulb. After potting, give a thorough watering and set outside in a cold frame or shady situation, then cover with ashes or long straw. After they have stood from three weeks to a month and thoroughly rooted, bring inside, in a temperature of about 66°; let the plants grow slowly under a bench or some other suitable place until about 6 inches high; then place on top of the bench in full light. An occasional application of liquid cow manure, starting about six weeks before flowering time, will stimulate the plant wonderfully. **Thorough rooting is essential.**

Lilium Auratum Ready Late November

The Gold-Banded Lily of Japan—The most beautiful variety of all the lily family—should be in every garden. Flowers white, dotted crimson, with a clear golden band running through the center of each petal; very fragrant. When grown in the open, prefers a position where it is somewhat shaded for part of the day, preferably during the afternoon. The position should be well drained and prepared with loamy soil to a depth of 2 feet. If the natural soil is too heavy, the following should be made up to replace it: Turfy loam three parts, leaf-mould, sharp sand, and a little wood ash one part. This must be well mixed and the bulbs planted with their base 7 inches from the surface, a little clean sand being placed beneath and around each bulb. When the buds are commencing to spread from the stem a light stimulant may be applied at intervals of 10 days if the weather is dry, and a light mulch placed over their roots. After flowering, but not until the

leaves begin to yellow, the old flower-stems may be bent over at half their height. It is more satisfactory than cutting them off, as this treatment leaves a funnel-like stem to carry water into the heart of the plant and set up rotting. During the winter months the bulbs require no attention whatever. *L. auratum* and its forms are really woodland Lilies, and there is no better place in which to grow them than a thin wood composed of summer-leaving trees; such conditions should be copied as far as possible when a site is being chosen in the garden. They do, nevertheless, succeed in beds and borders where their station has been well prepared.

AMARYLLIS HALLII

(*Lycoris Squamigera*) For Outdoor Planting

Produces in early spring attractive green foliage which grows until May when it ripens off and disappears, and one not familiar with its habits would think the bulb had died, but about a month later, as if by magic, the flower stalks spring from the ground to a height of two or three feet, developing an umbel of large and beautiful lily-shaped flowers three to four inches across and from eight to twelve in number, of a delicate lilac-pink shaded with clear blue.

Culture—As the bulb is perfectly hardy without any protection it can be planted either in the fall or spring, but we consider fall the best time as the bulbs will have a chance to get established before flowering time. Cover the crown about four inches. Very useful for the border or among shrubbery. Each, \$1.00. Doz., \$10.00.

ANEMONE (Windflower)

They succeed best in light, rich, well-drained loam. Plant in early October, or as soon as the ground can be worked in the spring. If planted in the autumn they should be covered with leaves, straw or long manure on the approach of winter.

His Excellency. A grand variety bearing flowers measuring as much as 3 inches across of the most vivid velvety vermillion, with glistening silvery white base on a blue background. Doz., 65c; 100, \$4.50; 1,000, \$40.00.

Special Mixed. Doz., 65c; 100, \$4.50; 1,000, \$40.00.

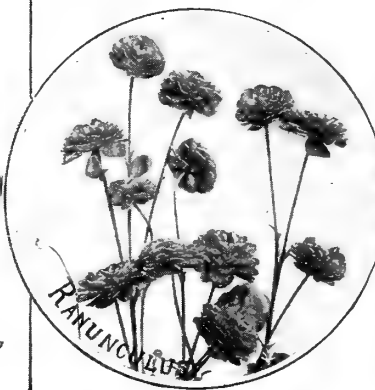

St. Bridget. A grand strain of Poppy Anemones whose flowers range in color from the deepest crimson to the purest white, embracing such delicate shades as cobalt, scarlet, rose, salmon-pink, and heliotrope. Most are semi-double. Doz., 85c; 100, \$6.00; 1,000, \$55.00.

BRODIAEAS

Coccinea. The Floral Firecracker, has stems rising to 2 feet, while the flowers are a vivid crimson tipped with pea-green. The resemblance to a bunch of firecrackers catches the eye at once. A group of these bulbs in a mass of ferns or light-foliaged plants is striking, and they do very well potted. They prefer a loose soil, and preferably gritty. Each, 15c; doz., \$1.50; 100, \$10.00.

Capitata. There are several species of Brodiaea called California Hyacinths, and a good one is *Capitata*. The stem is slender, capped with a head of violet-blue flowers. They revel in hot, dry places among rocks or in grit, and flower very early. Doz., 65c; 100, \$4.50; 1,000, \$40.00.

The very first flowers of spring are the minor bulbs, snow-drops, scillas, chionodoxas, crocuses, which come before narcissi. On these pages will be found many other interesting garden treasures, including those fine subjects for rock gardens, erythroniums, brodiaeas and camassias.

CALOCHORTUS

True Mariposa, or Butterfly Tulips

Cup-shaped flowers, one to many on a stem, marked with eyes and dots and pencilings in rich colors, yet each strain carrying out the plan on its own color scheme "Mariposa" is the Spanish word for butterfly.

El Dorado. The plants of this strain grow from 1 to 2 feet high and branch. The flowers are marvelous in variety. Scarcely two are alike; they may vary through white, lilac to purple and again through shades of pink to deep claret-red. They thrive best in porous soil, sandy or gritty, either in sun or light shade. Flowers are 2 to 4 inches in diameter.

Venustus Citrinus. A most satisfactory hardy species with deep rich yellow flowers with a black eye. Most excellent.

The above: Doz., 80c; 100, \$5.50; 1,000, \$50.00.

SPRING FLOWERING CROCUS

Bulbs Which Have Been Forced

GARDEN makers often inquire if bulbs which have been forced in the house in Winter can be planted in the ground when Spring comes. A few kinds can be treated in this manner. Tulips planted out will gradually recover and bloom well in a year or two. Easter lilies will often flower again in the garden in the Fall, but will not live over. Some hyacinths can be planted out and will make blooming plants in the hardy border. One variety, *L. Innocence*, can even be forced a second time, but will have weak stems. Freesias can be held over and forced a second season.

Vaughan's Seed Store

I wish to thank you for my order of daffodils, crocuses and tulips which I got last fall.

I have received many compliments for their beauty and size. The daffodils were the largest that I have ever seen. Also the crocus blossom.

Miss G. E. Pinkham

CAMASSIA

Camassias are attractive garden plants with which the average amateur is not familiar, but which can be grown readily enough in any garden, and which may be associated particularly well with tulips. The bulbs should be planted at this season. They should go four inches underground, and be spaced about five inches apart. A little clump of camassias blooming in May will add much to the beauty of the garden, and will certainly prove a novelty. The flowers are starlike in appearance, and borne on long spikes, the colors being lavender, purple or white. The purple species, called *Camassia Esculenta*, is particularly good.

Leichtlini. A California species, comes in deep blue and white. Either color, each, 15c; doz., \$1.25; 100, \$9.00.

Esculenta. Light blue flowers borne gracefully erect. The hyacinth-like blooms are pure in color, and will thrive almost anywhere. Height, 18 inches to 2 feet. Each, 10c; doz., 65c; 100, \$4.50; 1,000, \$40.00.

Miscellaneous Bulbs

ERYTHRONIUM HENDERSONII

ERANTHIS HYEMALIS (Winter Aconite)

Early in Spring the golden blossoms of Winter Aconite look charming, resting on an emerald-green cushion of leaves, forming a striking contrast to the Snowdrop, Scilla and Chionodoxa. The foliage remains long after the flowers, making the plant especially valuable in moist situations, such as under trees. Eight inches high.

Doz., 50c; 100, \$3.25; 1,000, \$27.50.

DOG TOOTH VIOLETS (Erythroniums)

If they had no other beauty than that of their richly mottled leaves, they would be well worth a place in the shady corner. Their flowers are 3 inches across, with stems 6 to 18 inches high. The colors run in delicate tints of white, pink, cream, bright yellow and rose. They are hardy in the coldest parts of the United States, and while they are at their best in a loose, gritty soil, rich in leaf mold, they also thrive in the greatest variety of clays, grits and rocky soils. In woodlands, in shaded corners, or in the crevices of rockwork in shade, is the place to naturalize them.

Americanum. It produces in April, small, lily-like flowers, which vary through white, pink, bright yellow, rose, and cream. The beauty of the flowers is greatly enhanced by the richly mottled leaves. They like a light, rather moist, well-drained soil. The bulbs should be planted about 5 inches deep. Doz., 60c; 100, \$4.00; 1,000, \$35.00.

Californicum has large cream-colored flowers. Leaves richly mottled. Easy to grow, and a large colony is a beautiful sight. Doz., 80c; 100, \$5.50; 1,000, \$50.00.

Citrinum is rather more erect in habit, with flowers almost pure white with strongly contrasting deep citron on lower third. One of the loveliest of all. Per doz., 80c; 100, \$5.50; 1,000, \$50.00.

Grandiflorum Robustum is a superb species with flowers of the brightest buttercup yellow. The leaves have no mottling—just plain green. It always attracts attention. Doz., \$1.00; 100, \$7.00; 1,000, \$65.00.

Hendersonii. Like Californicum, but the flowers are a lovely light purple, with centers a deep maroon, almost black. Most striking. Doz., 80c; 100, \$5.50; 1,000, \$50.00.

Revolutum Praecox is an early blooming unusually fine variety. The leaves are mottled in browns, the flowers large and of a very fine rich-cream color, richly banded maroon. One of the finest of all. Per doz., \$1.00; 100, \$7.00; 1,000, \$65.00.

Each, 45c; doz., \$4.50; 100, \$35.00.

IXIAS

The Ixia colors are rich, the center always differing in color from the petals. Very desirable for pots. If planted outside be sure to cover with straw or leaves

Named Varieties. Doz., 75c; 100, \$5.00; 1,000 \$45.00.

Mixed. Doz., 45c; 100, \$3.00; 1,000, \$25.00.

MUSCARI (Grape Hyacinth)

Muscari, or Grape Hyacinths, are a race of spring-flowering bulbous plants which have long been grown in British gardens. They are not showy when only a few are seen together, but a drift of them presents a picture of considerable beauty, especially if growing in grass, for which purpose they are well adapted. The species also look charming in clumps in the rock garden or border, and the Feather Hyacinth (M. plumosum), in particular, may be employed, with great gain, in pots in the cold greenhouse. In fact, pot culture gives this Grape Hyacinth such delicate and uncommon coloring, that it might well be grown anywhere under glass. All are very accommodating in their requirements, but prefer a good loam with a little old manure dug into it, and, in the case of the Feather Hyacinth alluded to, a rather warmer position. The bulbs should be planted during autumn at a depth of about three inches and about two inches apart.

Blue. Pretty little spikes of dark blue flowers; an old garden favorite, used largely for small beds, edging, etc. Doz., 45c; 100, \$3.00; 1,000, \$25.00.

Heavenly Blue. The best blue. Doz., 50c; 100, \$3.00; 1,000, \$27.00.

PLUMOSUM. Bearing in May handsome feathery plumes of violet colored flowers, very attractive. Doz., \$1.10; 100, \$8.00; 1,000, \$75.00.

RANUNCULUS (Buttercup)

Plant in November for early spring bloom in frames. Set 3 or 4 inches apart, pressing firmly into the soil, claws downward, and cover them with sand, then with soil; keep the crown of the tubers two inches under the surface. Water them well.

FRENCH MIXED. Doz., 65c; 100, \$4.50; 1,000, \$40.00.

VICTORIA HYBRIDS. Far superior of any Ranunculus that we know. Flowers are double and large. Doz., 75c; 100, \$5.00; 1,000, \$50.00.

SNOWDROPS (Galanthus)

SPIRAEA (Astilbe) Ready November

Beautiful, hardy garden subjects, attractive, not only for their gayly colored, feathery plumes, but also for their glaucous foliage. In the perennial border where they flower year after year, increasing rapidly. They will thrive in almost any soil, but prefer heavy ground, and a semi-shade. June and July flowering.

Pink Varieties. Each 60c; doz., \$6.00; 100, \$45.00.

SNOWDROP BYZANTINUS

SCILLAS (Squills)

As edgings and masses in beds and borders, Scillas are most valuable. They succeed in shady flower borders and bare shady places and odd corners.

SIBERICA (The Blue Squill). Bright blue, nothing more beautiful for edgings or pots in early Spring, flowering with the Snowdrop. Height, 4 inches. **Mammoth Bulbs.** Doz., 65c; 100, \$4.50; 1,000, \$40.00.

SPRING SNOWFLAKE (Leucojum Vernum)

A favorite little early spring flower having drooping, bell-shaped flowers, white, with small brown tips. Once planted in a favorable environment, they come up every spring, bearing more flowers each time. Excellent for rock gardens and naturalizing.

Doz., 80c; 100, \$5.50; 1,000, \$50.00.

SPARAXIS, Mixed

Graceful spikes 6 to 8 inches high; flowers of the brightest colors, tigered, streaked and flushed—a riot of color. Excellent for indoor winter flowering—about 12 bulbs to a 6-inch pot. Do not plant outdoors in cold sections. In cool localities, give winter protection. For southern gardens, especially in rockeries, Sparaxis are indispensable.

About 3 inches high. Doz., 75c; 100, \$5.00; 1,000, \$45.00.

Perennials for Fall Planting

HARDY perennials may be set out this fall in time to become well established before winter sets in; and next year will see them better developed, and bearing finer flowers than can be obtained from plants set in your border next spring.

This advantage is accompanied with very little extra risk. We do not list the kinds which need special protection through the winter. It is always well to apply a mulch over newly planted perennials, after the ground has frozen. This will tend to prevent winter thaws and frost heaving. Plants should not be placed where water stands, as excessive dampness in the winter causes rot.

All plants are F. O. B., Chicago.

Plants are shipped with their roots well wrapped; and as packages must go by parcel post or express, it is impossible to make

prices which cover postage, and are fair alike to all customers. So all prices in our plant list are F. O. B. Chicago, and if it is desired to have them sent by mail, postage should be added at zone rates. If sent by express, they go collect, at customer's expense.

FALL SOWING OF PERENNIAL SEEDS

Perennial seeds may be sown in the fall in flats or in well prepared seed beds, elevated above the surrounding surface and protected with a wooden curb, or in cold frames. Like annuals so treated, they will germinate early in the spring before the ground could be prepared for spring sowing. After the ground is frozen, the seed bed should be covered with a mulch to keep the frost in and prevent heaving. This treatment is especially good for slow germinating subjects.

Vaughan's Peonies

PEONIES, especially the modern introductions, are probably the most valuable, and most beloved of all perennial plants. Planted in sun or semi-shade in single clumps or long beds; or bordering lawns, shrub rows, and drives, they give a grand display of large fragrant blossoms of brilliant colors during June, followed by their exquisite foliage which is very ornamental during summer months. They are also most effective for home and table decorations, and last longer in water than many other perennials. Avoid buying cheap Peonies; they require just as much care as the better kinds, and are disappointing in the end.

Planting. Peonies may be planted from September first until May. Orders should be sent in at once so that we can forward when weather permits. Avoid planting too deeply, as this is often the cause of shy blooming, 2 or 3 inches of soil over the crown (eyes) being sufficient. We offer Divided roots, natural divisions, having 3 to 5 eyes of blooming size.

The figures preceding the varieties are the rating given to them by the American Peony Society, based on a scale giving 10 points for perfection.

Feeding. Peonies in established plantings need to be fed each Spring. A top dressing of Vaughan's Balanced Ration (5-8-7) well worked in will do wonders, but it should be applied early.

Roots by Parcel Post.—If to be sent by parcel post, add postage as follows: Single roots, 8c; two roots, 12c; 3 roots, 16c.

★Varieties indicated by star are of outstanding merit and are especially recommended by us for garden planting.

"S" refers to the three standard, or upright curling petals; "F" to falls or drooping petals.

Irises are most effective if planted 3 of a kind in a clump.

★ Those indicated by a star are medium priced varieties of outstanding merit and are especially recommended for garden planting.

As soon as German iris plants are received, plant them in a sunny, well drained place. Each plant should have at least eighteen inches clear space from other irises, as it will grow in a circle and many varieties spread rapidly. The rhizome, or fleshy root stock from which the leaves and roots grow, should be barely covered with soil, with the roots properly spread below, and the soil well firmed about them. Until the plant is established, give it frequent attention, watering in dry spells. In the first winter, after the ground has frozen, a light mulch to prevent thawing and heaving will be beneficial.

FEW know many of our prettiest and best known annuals may be sown in the fall, in fact some varieties, like the annual Larkspur, are much better, treated in this way. Ground should be prepared and seed sown just previous to the late heavy frosts. The fall-sown plants as a rule are much sturdier and better established on the blooming date than those started indoors. Early November is the best time, except for Pansies and Violas, which should be sown in September. Sweet Peas should be heavily mulched with leaves or straw.

Four Hardy June Roses for Planting this Fall . . . \$2

FRAU KARL DRUSCHKI

Prepaid For

JUNE roses are coming back in favor. Hardy as oaks, and producing the finest flowers of the whole rose family, these roses not only flower freely in June, but often produce another crop of blossoms in the fall. The blossoms are larger, more fully double, of better color and plants live for years even in the coldest states. We offer the four best hybrid perpetual, or June roses, for planting this fall.

Varieties Included in This Offer:

FRAU KARL DRUSCHKI (White American Beauty). Pure white, long, immense buds and perfectly double flowers. For bedding and for cutting it is the finest in its class. Each, 68c.

GEN. JACQUEMINOT. Bright shining crimson, shapely buds, fragrant. The Black Rose is noted for its good qualities. Each, 65c.

GEORG ARENDS (Pink Druschki). Pointed buds and blooms of pure soft pink, delicately perfumed. Very vigorous grower with good foliage. Each, 65c.

PAUL NEYRON. This magnificent rose is by far the largest variety in cultivation. Very double and full, deep rose and delightfully fragrant. Each, 65c.

FALL planting of all roses is growing in favor. Even the ever blooming hybrid-tea class benefits by fall planting when properly done, as it enables the plant to start growing earlier in the spring.

Planting Method: Select three or four sturdy stems and cut clean away all others; prune the selected stems back to four or five eyes. Set

the plant deeply, so that the crown where the stems unite is covered and the stems rise out of the soil. When frosts begin hill soil six or seven inches high around each plant, and cover the ground about them with several inches of dry leaves, or straw manure. In the spring, dead wood should be cut away and each stem cut back to three eyes.

Twelve Hybrid Tea Roses \$6

NEW PATENTED HYBRID TEA ROSES

To Buyers of Patented Roses: We cannot replace patented roses. The plants we sell are obtained from the introducers; we believe that with proper care they will grow and thrive; but they must be purchased with the understanding that no replacement will be made under any circumstances.

Better Times. (U. S. Plant Patent No. 23.) An outstanding rose. Firm texture, large double flowers of brilliant cerise pink. Long stems, dark green foliage and delicately fragrant. \$1.50.

Vaughan's High Grade Fertilizers

Vaughan's Lawn and Garden Fertilizer (5-8-6)

Five per cent nitrogen; eight per cent phosphoric acid; six per cent potash.—This mixture differs from our balanced plant ration, in that it is composed of plant foods in mineral form. The advantages of mineral fertilizer include the absence of objectionable odor, and the quality of being more readily soluble, which makes it more quickly effective upon plant growth. This is an excellent mixture for regular use in the garden plot in small quantities to insure vigorous growth.

For a new lawn, broadcast evenly 30 to 40 lbs. per 1,000 square feet. To stimulate an old lawn, apply 20 to 30 lbs. per 1,000 square feet, and during the growing season, wash it down immediately with the hose to prevent burning. For flowers and vegetables, use from 4 to 6 lbs. per 100 square feet.

Price, 5 lbs., 50c; 10 lbs., 85c; 25 lbs., \$1.50; 50 lbs., \$2.50; 100 lbs., \$4.00; 500 lbs., \$17.00; 1000 lbs., \$32.00; 2000 lbs., \$60.00.

For lawns, use 20 to 40 lbs. per 1,000 square feet; and for cultivated gardens, 4 to 6 lbs. per 100 square feet. As liquid manure, use 1 part to 30 parts of water.

Lilies are so precious, with that rare quality of beauty which makes them the natural symbols of purity and perfection, we are apt to assume that flowers so lovely are difficult to grow.

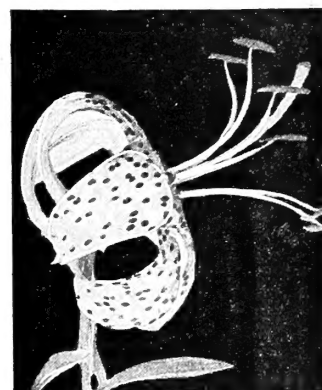

But the reverse is true. There are among them, only a few difficult subjects. Most lilies are true "flowers of the field," hardy vigorous and lasting. The ten varieties we have chosen for this collection, if planted in a well drained location with a foot of mellow soil, will grow and multiply, contributing their beauty to your garden picture for many years.

We have omitted all subjects which present any difficulties to the beginner. There are none which demand special treatment or environment. All these varieties can be shipped to you without delay in the regular planting season.

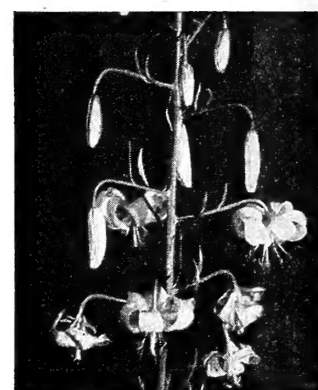

Good friable garden soil is needed, and no manure should be used. Use sand to loosen the soil if it is too heavy. A porous, friable, sandy loam is best. The depth of planting is important. The following varieties should be set with eight to ten inches of soil above the bulbs: Regale, Tigrinum Splendens, Elegans, Phillipinense Formosum, Tenuifolium. The others in this collection may be planted four to five inches deep.

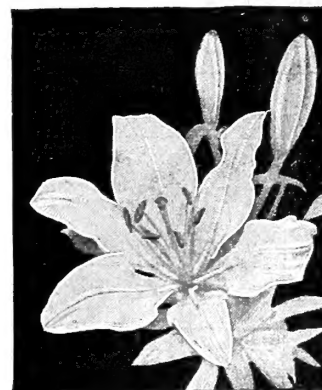

LILIUM Superbum.

LILIUM Trigrinum Splendens

LILIUM Tenuifolium.

LILIUM Umbellatum.

BULBS are the ideal flowers for beginners. If a few simple rules are followed, he can hardly fail to produce flowers of first quality, provided he plants quality bulbs.

Within each bulb we sell you is a flower, grown halfway to maturity by expert methods. Planted in your garden in a well drained place this fall, it will complete its growing in the winter and early spring, and its flower will greet you before weeds appear.

Not even cultivation is required for this harvest. No insects will prey upon the flowers of spring bulbs, and they have no diseases to require expert treatment. Of all the rewards won by the gardener, that found in the beauty of spring-flowering bulbs is the most dependable and satisfying.

Spring-flowering bulbs prolong the garden season by a month at least. Not only that, but among them are flowers which even did they come in June, when gardens are crowded with glory, no gardener would be without.

The purchase of spring-flowering bulbs should not be considered an expense, to be charged to one garden season. It is an investment. A stock of bulbs has been known to produce flowers in the same garden for a century.

Even the labor of lifting bulbs after flowering may be dispensed with. All do excellently when left undisturbed year after year. This practice, indeed, is recommended for the daffodils. And tulips will suffer small loss if allowed to remain in a bed where they have done well, year after year.

How to Plant Bulbs

Plant all fall bulbs as soon as they can be obtained, and you are willing to disturb established beds. Daffodils and hyacinths benefit from early planting. Tulips should go in when the leaves of trees fall, so they have a season of growth before the ground freezes.

In case of necessary delay, all fall bulbs can be planted as late as the ground can be worked. A light mulch placed over the proposed planting spot will keep the frost out, if delay is unavoidable. A mulch over late planted bulbs placed after the ground is frozen, will prevent thawing and heaving.

A complete plant food applied to the soil at the rate of 5 pounds to 100 square feet, raked into the top soil after planting, will benefit the bulbs. A similar application after blooming, where bulbs are left in the ground, will help mature large bulbs for the next year's flowering.

Use no manure with bulbs, unless it has been thoroughly rotted and can be spaded into the ground several months previous to planting.

Depth of planting is important; and the chart on this page gives the preferred depth for each subject.

If planting with a dibber, take care that the bulb rests on the soil and is not "hung"—that is, left with a hole beneath it caused by the point of the dibber.

Most Beautiful of the Parrot Tulips

WHILE resembling the Parrot type in the extraordinary size of its blossoms, and its beautifully fringed and fluted petals, Fantasy is really unique, perhaps the forerunner of a new race. It has a straight, stiff stem, which most Parrots lack, and this makes it stand up in the borders instead of hanging its head. Fantasy originated as a sport of the famous Darwin tulip Clara Butt, and perhaps its greatest charm is the clear, true pink color of its forerunner. There are many tulip fanciers who regard Clara Butt as most beautiful of all because of this color. But while Clara Butt is a relatively small Darwin, each petal of a well grown specimen of Fantasy will measure three inches long and two inches across. On the back of each petal is a marking of emerald green. A group of Fantasy in your border will be a center of interest in the tulip season and a never failing attraction to garden visitors.

Daffodils for Naturalizing

DAFFODILS are the first major flowers to bloom in the spring. By nature they are informal flowers, and look best when grown in drifts, in the shrubbery or under trees. They like to nestle among the roots of shrubs, and as they bloom before the leaves develop, they thrive in places which later in the season are well shaded. Our naturalizing mixture is an exceptional value, containing many of the best named Trumpet, Leedsii, Star and Poeticus varieties. Plant them and do not disturb until they crowd; the bulbs may then be lifted and replanted over a much larger area. A purchase of bulbs is an investment which will pay in bloom for a lifetime.
